Beam 1 & 7	440.02	440.02	439.86	440.02	439.96
Beam 2 & 6	440.15	440.15	439.99	440.15	440.09
Beam 3 & 5	440.24	440.24	440.08	440.24	440.18
Beam 4	440.34	440.34	440.18	440.34	440.28

*For fabrication only

Notes:

Use 1 3/16" x 1 1/2" slotted holes in top and bottom connection angles 4 x 4 x 1/2 at South side of Beam 4 only. Provide 5/16" plate washers for slotted holes. Bolts shall be finger-tightened prior to the deck pour for Stage II Construction and then be fully tightened after completion of the deck pour for Stage II Construction. Two hardened washers shall be required over all oversize holes for diaphragms.

Is and Ss are the moment of inertia and section modulus of the steel section used in computing fs due to non-composite loads.

Ic(n) and Sc(n) are the moment of inertia and section modulus of the composite section used in computing fs due to short-term composite loads.

Ic(3n) and Sc(3n) are the moment of inertia and section modulus of the composite section used in computing fs due to long-term composite loads.

DC1 is the dead load acting on the non-composite section.

DC2 is the dead load acting on the long-term composite section.

DW is the dead load acting on the long-term composite section due to wearing surface.

Ma (Strength I) = 1.25 M(DC1+DC2) + 1.5 M DW + 1.75 M($\frac{1}{4}$ +Imp)

ϕ Mn is the full plastic moment capacity computed in accordance with Appendix D6.1 and 6.10.7.

fs (Service II) is the sum of the stresses due to DC1+DC2+DW+1.3($\frac{1}{4}$ +Imp)

fs (Total) (Strength I) (Non-Compact Section) is the sum of the stresses due to 1.25(DC1+DC2)+1.5DW+1.75($\frac{1}{4}$ +Imp)

Vsr is the maximum shear range in the span 0.75($\frac{1}{4}$ +Imp)

STRUCTURAL STEEL DETAILS
F.A.S. ROUTE 1848 - SECTION 28-4BR
ST. CLAIR COUNTY
STATION 356+18.50
STRUCTURE NO. 082-0272

DETAIL OF SPLICE
"NTR" denotes members to which Notch Toughness Requirements are applicable.
All structural steel for splice plates shall be AASHTO M270 Grade 50.
